## Issues facing school education discussed

Staff Reporter

**CHENNAI:** The second edition of the XSEED conference on the future of school education, organised simultaneously in New Delhi, Mumbai, Hyderabad and Chennai on Tuesday by iDiscoveri, had experts from different fields talking on issues concerning the school education system of today and tomorrow.

Speaking via videoconference, author Gurucharan Das spoke on nurturing self-confidence, ambition, curiosity, responsibility and integrity in children.

Mr. Das said corruption at the ground level harms any system. Referring to the government school system that has nearly 3.7 million teachers, he said half of them do not do their duties properly and that is a moral failure.

A panel discussion on 'Society's Expectations from Schools' saw the exchange of both, pessimistic and optimistic views from the speakers.

Karti Chidambaram, member All India Congress Committee, said there is very little political will to take up reforms in the education sector. "If transformation has to take place, it has to come from the government. We need to start from the Panchayat School at primary level," he said.

Committee of the BCCI, was of the opinion that career choices are driven by demand more than one's passion.

Michael Pelletier, Minister-Counselor (Public Affairs and Public Diplomacy), American Embassy, New Delhi, said although slow changes are happening we need to work more.

Mala Ramadorai, chairperson of the Citi School of Special Education in Mumbai,

argued that every citizen has a role to mould the next generation, especially the less privileged. "Confidence can be fostered through music and arts in schools," she said. Steven Rudolph, director, JIVA Education, said schools should play a greater role in identifying potential in government school children as the challenge for school of tomorrow.

The other deliberations of

Peter M. Senge of MIT Sloan School of Management and David Perkins, senior professor of Harvard University, were brought live through videoconference technology. Ashish Rajpal, CEO, iDiscoveri Education, presented a case study on improving learning in schools. He emphasised on the need to engage while teaching and importance of teacher training.
