Brainstorming session on quality education

Staff Reporter

NEW DELHI: Educationists comprising school heads and business leaders came together in the Capital on Friday for a conference on "Education beyond boundaries" organised by the iDiscoveri XSEED organisation.

The "School of Tomorrow Conference-2011" focussed on the need for improving quality in education through investments in better teaching methods and processes

The conference featured a panel of educationists, business and thought leaders.

The conference highlighted innovative case studies that have broken conventional methods and demonstrated visible results on children's learning

Prof. Alison Gopnik, who has written books on child psychology, delivered an address on cognitive abilities of children and highlighted the need for uninhibited exploration, experimentation and reasoning in the education space.

"The time for quality in school education has come. Parents, employers and government are demanding quality outcomes from schools; students who can demonstrate deep grasp of concepts, better communication, and an overall confidence that is visible immediately. Such an education is now in the reach of every school irrespective of its access to resources," said iDiscoveri managing director Ashish Rajpal.
