-The first of its kind XSEED Workshop Designed for Parents' to Realize the Potential of their Child to be held at Hyderabad Hyderabad, 9 February, 2011: iDiscoveri, the innovative education enterprise focused on learning and leadership, is set to organize the first of its kind XSEED workshop for parents' - Child of Tomorrow here at Hyderabad. Designed to help a parent understand and identify the child's true potential the workshop will be addressed by Ashish Rajpal, Founder & Managing Director, iDiscoveri Education. Over 400 parents along with children are likely to attend the workshop. The workshop will be held on 13th February 2011 from 10 AM at Yogi Bear Park, Neelkote Road, Hyderabad. Entry to the workshop is by invitation only. Parents can contact the schools for details and register, informed Mr. Anustup Nayak, Partner – iDiscoveri Education.

Child of Tomorrow will highlight how good parenting can help shape the child's future in today's competitive times. Ashish will share his experience in child development and highlight the role of parents' in context of education and learning, said Mr. Anustup Nayak, Partner, iDiscoveri Education addressing the media today.

iDiscoveri is working towards bringing cutting-edge research insights to improve the knowledge base of school leaders. The organization has started work on educating parents on their role in school education, and the forthcoming Child of Tomorrow is a significant step in that direction.

Focus group discussions organized with parents' of children in the age-group of 4-11 years in Hyderabad, highlighted that parents would like to know their children better to prepare them for the future. Bringing up a child in today's time is a challenge and parents are in the lookout for effective solutions for the same.

Speaking on the occasion Anustup Nayak said "In these competitive times, when the scramble for marks is the hallmark of every classroom, it is a challenge to bring up children. The pre-middle school stage in particular assumes more significance, since children start grasping the fundamentals of learning, which serve as a base for the rest of their student life. More importantly, this is when they begin to form their perception of success. Hence, at this stage, it is important for every parent to discover the child's true potential and guide him/her accordingly."

Child of Tomorrow is a unique workshop that has been designed to give the parent first-hand account of the child's strengths and weaknesses. The workshop aims to go beyond the traditional 'Progress Report' route and give a 'Strength Report' for the child that will enable the parent to understand the child better so that he/she could be moulded accordingly. The workshop will involve a series of activities that has been designed to help one become the ideal parent, and the child to become the ideal student. These activities recognize the fact that all children are special in their own right, and can be taught the learning techniques that suit their way of learning. While parents will attend the discussions on good parenting, children will experience the XSEED way of experiential learning.

Child of Tomorrow will be a forum where iDiscoveri will leverage its understanding of learning methods, vindicated by the enormous success of XSEED, a proven learning tool used by over 400 schools across India and now touches 130,000+ children and 12,000 teachers.

In Andhra Pradesh, iDiscoveri's XSEED has been adopted by over 100 schools across the state touching over 40000 children. Schools that have partnered with iDiscoveri in the state include Hyderabad Public School, Glendale Academy International, Nraj Public School, Supatha High School, Pragathi Vidya Niketan, DPS Vijayawada, Kennedy Next Gen Kids, Paranjita Group of Schools, Shree Gowthami Smart School, and more.
